

COTSWOLD

COMPANY

WILL IT FIT?

We want to ensure your new sofa fits comfortably into your home, so we've put together a helpful checklist to run through before you purchase.

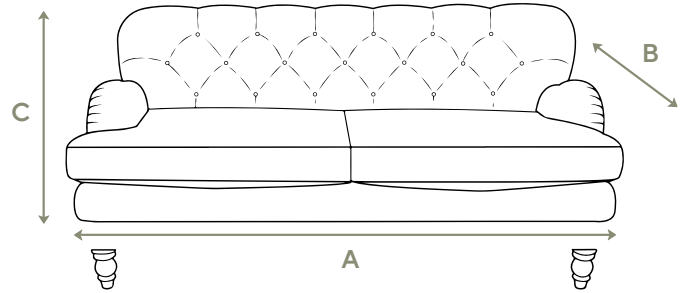

STEP 1: Your furniture

Firstly, take down the dimensions of your chosen sofa. These can be found on our website. Simply search for your item and click 'Specifications' underneath the product images.

A. Width:

B. Depth:

C. Height:

Many of our sofas arrive with the feet unattached; you can find this information on our website. If you are unsure, give us a call on 0333 200 1725.

STEP 2: The route

Track the journey your sofa will take - starting from the delivery van to your chosen room. Plot any potential pinch points, such as the garden gate, front door or stairwell. To mitigate unnecessary damage, remove any obstacles that could get in the way, like furniture, mirrors/artwork on the wall or stair gates.

The sofa can be rotated through the gaps, so make sure:

- The height of the sofa is smaller than the height of the gap
- The depth of the sofa is smaller than the width of the gap

Their key measurements to take are outlined below.

1. DOORWAYS

Narrowest doorframe width:

.....

Narrowest doorframe height:

.....

3. STAIRS

Narrowest stairway width:

.....

Height between banister & ceiling:

.....

Tight corner? Height from floor to ceiling:

.....

4. OBSTACLES

Number of wall fixings:

.....

Height from floor to light fixing:

.....

5. HALLWAYS

Narrowest hallway width:

.....

Narrowest hallway depth:

.....

Narrowest hallway height:

.....

Potential problem areas:

- | | |
|---------------------------|-----------------------------|
| 1 Doorways | 5 Internal doors & hallways |
| 2 Obstructions | 6 A clear path |
| 3 Stairways & tight turns | 7 Outdoor area |
| 4 Obstacles | |

Potential problem areas

1 Doorways

Take the narrowest measurement of the inside of the doorframe, along with the height. The sofa can be rotated to fit the gap, so check whether:

- The depth of the sofa is smaller than the width of the gap
- The length of the sofa is smaller than the height of the gap

2 Obstructions

For tighter spaces along the route, it's important to open the doors as far as possible and then measure the smallest internal gap. Be mindful of radiators, shelves and items along the stairwells that can cause obstructions. You'll also need to take any door handles, handrails or wall fixtures into account when measuring.

3 Stairways and tight turns

If your route includes any awkward corners and stairwells, check the following:

- Firstly, note down the width of your stairs at their narrowest point. Refer to the height of your sofa and ensure it is smaller than the measurement of your stairs.
- If you have a banister that the sofa needs to be lifted over, check that the height between the top of the banister and the ceiling allows enough space for the depth of your item.
- If you have a banister that the sofa needs to be lifted over, check that the height between the top of the banister and the ceiling allows enough space for the depth of your item.

4 Obstacles

Note down the measurements of any fixed obstacles which may interfere with your delivery. This can include light, wall or floor fixtures.

5 Internal doors and hallways

Measure all internal doors and doorframes to ensure the sofa can fit into your room of choice. Be sure that every hallway has enough space to manoeuvre the sofa. Measure the height, width and depth of the hallway, making sure the shortest measurement of your sofa is less than the width of the hallway.

6 A clear path

Plan and clear your path. The quickest route may not always be the easiest, so prepare for any awkward turns. Don't forget to clear your room of choice and make space to position the sofa. Protect your floors from any scrapes or scuffs by covering them prior to delivery.

7 Outdoor area

Don't forget to measure the area outside your front door. Be aware of any gates, porches, flower beds, pathways etc. This also includes building lobbies, lifts and hallways if you are in an apartment building.

Other helpful measurements

Is there a lift?

If our delivery team will need to use a lift to access your property, this will also need to be measured.

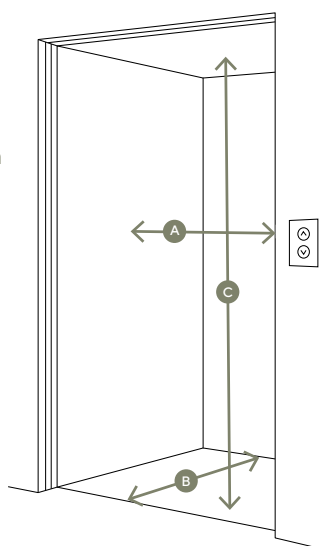

Check if there is a weight restriction in the lift and compare this to the weight of your sofa.

Then, assess the internal width (A), depth (B) and height (C) of the lift and ensure these measurements are greater than those of your sofa.

A. Width:

B. Depth:

C. Height:

In the room...

You might find it helpful to mark out the measurements of your new furniture on the floor with masking tape to check you're happy with its size and proportions.

If you have done your checks and feel satisfied that it will fit, you're ready to order.

Don't forget, you can also order free wood samples and fabric swatches online.
